

ABSTRACT

A framing system & method for paintings, photos and other sheet-like materials or shadow-box for 3D materials, wherein the protection corners 3 for the frames are made of transparent including semi-transparent material which will allow the viewer to see through the corners and get the whole picture of the framed object. The hanger 1 is an easy-to-balance hanger with one side or both sides having groove structure 2. The cross-section A-A of the frame 4 is a rectangle including square form 4.1 with one corner being cut off a groove in right-angle 4.2. This simplified form means simplified workmanship in production.
